Klimate could link to Carbon Trust

Carbon trust 0% loans for energy efficient equipment installation is all go for SME's (EU ruling of SME is 250 employees or less) with loans available from as little as £3000 up to a maximum of £500,000 dependant on circumstances.

The past year has been especially hard for almost all small to medium sized enterprises (SME) in the UK, and the Carbon Trust realise this and are trying their best to help SME's out of the recession.

The government-funded scheme from the Carbon Trust opens the door to a brighter future for many companies. The scheme states that if a business is going to 'do their bit' in cutting carbon emissions they need to install new, more energy efficient equipment to their site.

It is thought that Klimate High Speed doors' product range will qualify for the scheme and why not use this scheme to enter a more energy efficient future through a Klimate High Speed door. As the doors are fast acting they help cut spiralling energy costs by maintaining a constant temperature in doors thus the long term return on investment is plain to see and really quite remarkable.

high-speed door products, KLIMATE is recognised as a UK leading specialist in maintaining all makes of high-speed doors. (www.klimate.co.uk).

The newest development at Klimate is the Klimate K2 Insulated High Speed door, which is a freezer/chiller door suited perfectly to cold stores.

The K2 insulated is under taking the final test on a third site after being successfully tested on two of the UK's leading supermarkets cold stores from late 2009 into early 2010.

Once the K2 Insulated has completed this final test Klimate aim to shake up the Freezer/Chiller door industry, as this innovative product no longer requires the energy guzzling heaters and dehumidifiers that other competing products do, Klimate will again take one step ahead of the competition.

The Klimate range is designed with environmental issues in mind, High Speed opening/closing times to reduce heat loss, whilst also taking into account customers personal preferences.

Each door is manufactured to each customers personal wants and needs, from the colour of the legs to the design of the curtain and also the specific door specification suited to their opening, such as induction loops, which automatically open the door when driven over by a folk lift truck for instance.
